CSS3	Foundation CSS	MongoDb
JavaScript	Bootstrap CSS	Ajax
jQuery	Sass/Less	MVC
PHP	AngularJS	Wordpress

INDUSTRY EXPERIENCE

Radixx International – Web Designer/Developer (09/15 – present)
I'm currently being tasked to redesign a few of Radixx's user pages, primarily on the administrative level. I have also worked very closely with the Product Owner and QA to create a rich, yet familiar environment where users can perform their job much more efficiently while keeping the vast amount of information they require organized and easy to access. Although I have yet to start development, my primary tool of choice since Day 1 has been UxPin, which is used to create low and high fidelity wireframes and functioning prototypes.

AAA National – Jr. Java Developer (05/15 - 08/15)
While at AAA, I was primarily tasked with small, basic tickets to get a better understanding of how Java worked on a corporate/enterprise level. Having no prior Java experience, I do feel that this experience was a great way of familiarizing myself with a new development environment while hitting the ground running. Although this position was a 3 month contract, I did learn quite a bit! The technologies I used were primarily Java, jQuery, and Oracle SQL. Version control was handled with SVN.

BookIt.com – Frontend Developer (11/14 – 3/15)
At Bookit, I was responsible for working with the inhouse team on the new facelift site scheduled to be released 4th quarter of 2015. Responsibilities included working closely with other developers and the product owner to bring fresh, new ideas to implement into the site. Technologies used: Bootstrap, Javascript and jQuery, PHP, MySQL, and Mustache.

"My Left Ear" – e-Commerce site 2014
An e-commerce art site that was going to go live Fall 2014. I've worked closely with a client to develop a responsive Arts/Humanities website that would have showcased artists and artwork for purchase or commission. Unfortunately the client wasn't available to confirm the shopping cart and shipping details and the project ultimately was not completed.

"Is There Parking?" - Mobile App 2014
Developed mobile app specifically for the Full Sail community interested in parking convenience. Used AngularJS and Bootstrap CSS to create a user-friendly experience.

"Space Bar" - e-Commerce site 2014
Designed and developed storefront and fully integrated shopping cart for sales of mechanical keyboards.

EDUCATION

Full Sail University, Winter Park, FL
Bachelor of Science, Web Design & Development 10/2014
